POWER GENERATION SOLUTIONS

ACCELERATING *TIME TO POWER*

Stephan Hardt | Director, Power Generation Solutions

NRG's growth agenda creates three electrical-delivery environments.

1.5 GW

TEF PORTFOLIO

One project operating; two targeting mid-2028.

5.4 GW

NEWBUILD DEVELOPMENT

Turbine and EPC access supports a runway through 2032.

25.8 GW

OPERATING FLEET

Approximately 1–2 GW of upgrades under evaluation.

DIFFERENT ASSET STATES. ONE REQUIREMENT.

Preserve schedule certainty through energization.

Time to power is an electrical execution problem before it is a cable-buying problem.

Three execution risks erode certainty between design and energization.

01

LABOR & DEMAND PRESSURE

Long pulls, dense terminations and compressed turnover windows concentrate labor when flexibility is lowest.

02

MATERIAL + INSTALLATION FIT

Ratings, routes, reel lengths, accessories and releases must match the workface, not only the BOM.

03

FRAGMENTED COORDINATION

Civil, electrical, OEM and contractor decisions can converge after routing and procurement are locked.

Late handoffs become schedule and commissioning exposure.

One coordinated flow aligns decisions from planning through turnover.

— without changing project accountability.

FIELD-ENGINEER WHAT IS UNIQUE. PREFABRICATE WHAT REPEATS.

Adjacent experience indicates where to test — not what NRG will save.

No presumption that the answer is prefab — or that Southwire belongs in the solution.

Family-held since 1950 — from copper rod to finished cable.
