

Cable supply and assembly partnership

Compare how cable supply, preparation, identification, testing and packaging could be divided for a representative assembly.

APPLICATIONS TO EVALUATE

- | | | |
|---|--|---|
| <p>1 Cable and prepared end</p> <p>Cable specification and preparation steps documented for one representative assembly, including strip lengths and tolerances.</p> | <p>2 Termination and identification</p> <p>Lug selection, crimping tools and sleeve marking agreed per drawing and termination standard, with first-article review.</p> | <p>3 Inspection record and packaging</p> <p>Inspection and test record, packaging and labeling defined for each shipment, and responsibility assigned for each step.</p> |
|---|--|---|

Established: Southwire wire and cable manufacturing and supply.

For evaluation: the prepared kits, cable packages and assemblies shown are application concepts, not qualified Southwire products.

Illustrative model. Ratings, cable sizes, clearances and termination selections are subject to application engineering. No code compliance, engineering approval or certification is implied.

PROPOSED NEXT STEP

Compare specifications, capacity and responsibilities for one representative assembly.
